Richard Herrmann Associates Ltd was formed in 1987 and has been going from strength to strength ever since.

In 2011, Richard Herrmann decided to 'pass the baton' to Martin Bates and Richard Ponter, who became the company principles, having both worked alongside Richard for many years.

Richard Herrmann Associates Ltd.,
Huntingdon

Introduction

Spire Nottingham Hospital

Richard Herrmann Associates Ltd is an approachable and experienced structural and civil engineering consultancy based in Cambridgeshire, UK.

We provide civil and structural designs, guidance and advice on your project to ensure a smooth progression from feasibility to completion.

We are well versed in providing various services and roles to our wide-ranging client base, all whilst being flexible and understanding of their needs.

Our aim, at all times, is to assist our clients to procure their projects on time and within budget.

We do this by anticipating and solving problems before they occur on site.

Having this input upfront usually brings construction cost savings that are much greater than our professional fee costs.

Whether a smaller project client requires assistance with a specific issue or a large commercial client requires a full finite element analysis calculation, a suite of drawings and site inspection duties, we are able to provide this support.

Contact us

If you feel that we might be able to assist with your project please feel free to contact us, by clicking or scanning above. We'd be delighted to hear from you.

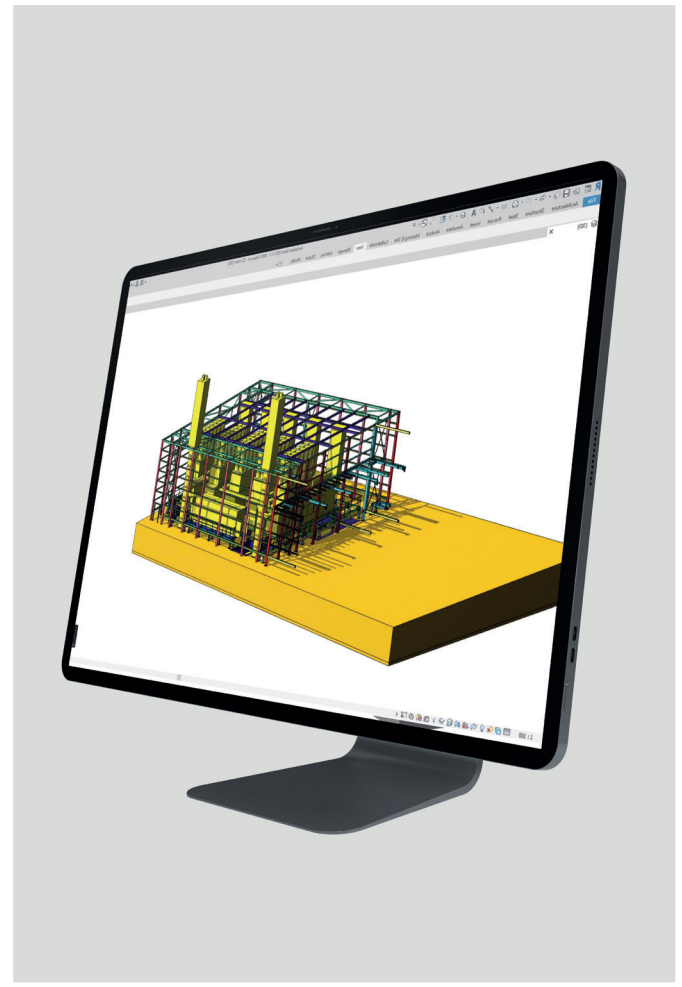

A Passion For Design

Software Capabilities

- We use the latest specialist design software, which allows structures to be analysed quickly and efficiently.
- We can utilise **R-Fem by Dlubal** for analysing structural elements within a virtual building model. This software is extremely powerful and allows the intricacies of the structural behaviour to be viewed, such as the amount of sway or deflection under the applied loads.
- The very latest version of **Revit and AutoCAD** (both produced by Autodesk) are used on projects where it is appropriate to do so.
- Whether a smaller project client requires assistance with a specific issue or a large commercial client requires a full finite element analysis calculation, a suite of **drawings and site inspection** duties, we are able to provide this support.

The Power of People

- Our projects are overseen by experienced Chartered Structural Engineers (M.I.Struct.E).
- With more than 100 years combined experience.
- Who have successfully served more than 6,500 clients over 35 years.

Our Experience

Data Centre, Paris

Our adaptability and attention to detail allow us to assist clients with particularly difficult or challenging projects, especially those involving specialist designers, contractors or products. Whether your project involves specialist medical equipment or particularly sensitive occupants, we should be able to provide technical and professional support to your scheme.

Our civil and structural design services include complex, specialist projects, such as hospitals, datacentres, medical MRI and CT scanner rooms, vehicle manufacturing plants, education classrooms, sportshalls, plantrooms and equipment rooms.

We also provide design services for bespoke projects, such as staging equipment, manufacturing industry gantries, countryside foot bridges and many more.

We have extensive experience in designing to appropriate design codes, both British Standards and Euro codes.

Why Use Us?

Whilst an initial outlay in professional fees might seem optional or unnecessary, this investment will usually reap huge rewards by bringing considerable efficiencies to the construction process, which results in overall cost savings.

Our friendly and approachable team will talk through your requirements to understand the key points of the scheme and ensure that the design is appropriate and efficient, resulting in a smoother process for you and your team.

Our targeted attention to detail will ensure that the right people deliver the right results for your project. This is why clients return to us time after time.

Our assistance increases productivity and profits as we assist in avoiding potential pitfalls, issues or delays.

Experience and professional qualifications combine to achieve great results.

Whether your project involves specialist equipment or particularly sensitive requirements, we are ready, willing and able to provide technical and professional support to your scheme.

Our adaptability and attention to detail allow us to assist clients with particularly difficult or challenging projects, especially those involving specialist designers, contractors or products.
